

LPG multivalves model AT00

Tomasetto multivalve for LPG tanks, model AT00, the newest version of the former model MTE88, is in conformity with the previous European Regulation ECE 67R-00 and is equipped with the following safety devices: pressure relief valve (provided only with the class A version), 80% filling limiter, excess flow valve, non-return valve, manual (service) valve, mechanical level indicator. Tomasetto multivalve model AT00 is available for the most diffuse LPG tanks (cylindrical and toroidal). A "left" configuration for some cylindrical versions is also available and, upon request, personalized multivalves can be provided as well.

Tomasetto AT00 multivalve can be supplied with different types of filling units and fixing accessories and is available in the following versions:

- MULTIVALVE CLASS A
- MULTIVALVE CLASS B

CLASS A

complete with pressure relief valve (PRV)

CLASS B

without pressure relief valve
